

Caution: Do NOT apply this product on hot or warm to the touch surfaces.
Do not apply in direct sunlight or in the heat of the day.
This product works best when applied in the shade and on cool (not cold) surfaces.

Club Saver *Plus*™

- 1) Shake the bottle well before and during use .
(shake the bottle until you hear the agitator rattle)
- 2) Apply 4 to 6 drops to the face of the club. **(A)**
- 3) Scrub thoroughly with **Club Saver Plus** and a golf brush, being sure to get all the dirt out of the grooves. **(B)**
- 4) Wipe clean with a soft clean towel. **(C)**
- 5) Apply **Club Saver Plus** to the orange applicator pad and then clean the shaft and club head. **(D)** Repeat step 4 **(E)**.

Reapply as needed to maintain the protective barrier and that better than new club look.

If hands become dried out during use, apply hand cream.

- ▶ **No Build-up** with repeated use.
- ▶ **Non Toxic** environmentally safe and biodegradable.
- ▶ **Contains No** harmful acids, harmful chemicals, ammonia, silicones, alcohol or harsh abrasives.

*Not for internal consumption. Keep away from children.
if swallowed drink water. If contacted with eyes, flush with water.*

Satisfaction Guaranteed when used as directed. Manufacturer offers no expressed or implied warranty nor accepts responsibility for misuse. Liability is limited to refund of purchase price of product.

Club Saver Plus is designed to make it easier for you to keep your golf clubs maintained and protected. A club that has been treated with **Club Saver Plus** is being protected with a microscopic layer of all natural 100% pure Carnauba wax. This protective barrier in no way has any effect on the flight of the ball. Dirt on the face of the Club is kept from being able to form a bond. The result is a club that is easier to maintain after each use during the round. No more need for major cleaning operations between rounds using toxic substances. **Club Saver Plus** is especially effective on the new carbide and diamond faced clubs where dirt is most likely to adhere to the surface. Your clubs will no longer be susceptible to damage from those sometimes nasty weather rounds or corrosion from salt air.
